Web Development Projects Report

Three responsive websites built with HTML and CSS: a bakery, a food-ordering page and an online shopping store.

Student Details

Name: S. Jyothsna

Branch: CSM

Section: 4

Roll No.: 26001109

Project Overview

Project	Website name	Files
1	Sweet Treats Bakery	Backery.html, bakery.css
2	Foodie Corner	food.html
3	StyleCart | Aesthetic Shopping	Online Shopping.html, style.css

Folder: Web_Development_Activity (VS Code, Live Server at 127.0.0.1:5500)
Date: 26 October 2026

Introduction

This report documents three small websites created as part of a Web Development activity. Each project is a single-page website that shows how a real local business or store could present itself online. All three were written in **HTML** for structure and **CSS** for design, edited in **Visual Studio Code**, and previewed in the browser through the **Live Server** extension. The project folder is tracked with **Git** (branch *main*), which is why the VS Code screenshots show a commit message file and a Readme.md.

Each section below follows the same pattern: the aim of the project, the page layout, a summary of the code, and the exact screenshots of the source code and the final output in the browser.

Tools and technologies

Tool	Purpose
HTML5	Page structure: header, nav, sections, cards, footer
CSS3	Colours, fonts, spacing, flexbox layout, hero gradient, hover effects
JavaScript (small)	Order Now buttons in Foodie Corner use onclick with alert()
VS Code + Live Server	Writing code and previewing it in the browser instantly
Git	Version control of the Web_Development_Activity folder

Comparison of the three projects

	Sweet Treats Bakery	Foodie Corner	StyleCart
Theme	Cakes and cookies	Fast food menu	Fashion and accessories
Main colours	Berry pink #9c4966, cream #fff0f5	Coral, peach #fff0e0, dark #333	Brown #49382f, cream #faf7f2
CSS location	Inline style plus bakery.css	Inline style in head	External style.css
Items	4 products	3 dishes	8 products
Special offer	10% off birthday cakes	20% off first order	Shop Now banner

1. Sweet Treats Bakery

Aim. To build a friendly online page for a neighbourhood bakery in Vijayawada that shows its products, a current offer, the custom cake service and contact details. The tagline of the site is *Fresh Cakes, Cookies & Happiness!*

Page structure

- **Header:** shop name and tagline on a berry-pink bar (#9c4966) with white text.
- **Our Products:** a **div.products** container using flexbox in a column with a 15px gap. Each product is a white **div.card** (250px wide, 12px rounded corners).
- **Special Offer:** a pink (#f8d7e3) box announcing 10% OFF on birthday cakes.
- **Custom Cakes:** a short paragraph saying cakes are made for birthdays and weddings.
- **Footer:** Contact Us heading, phone 9876543210 and the address Sweet Treats Bakery, Vijayawada.

Products and prices

Product	Price
Chocolate Cake	₹450
Pastries	₹80
Cookies	₹120
Birthday Cake	₹700

Code summary

The page keeps its main styles inside a **<style>** block: body uses Arial with a #fff0f5 background and centred text; header and footer share the same berry background; h2 headings use the same berry colour. The file also links an external stylesheet, **bakery.css**, which supplies the decorative bakery illustration pattern that repeats behind the product and custom cake sections in the final output.

Objective: To create a simple bakery website where visitors can view different bakery products and their details.
Description: The website displays cakes, pastries and cookies in an organised way. It includes product names, prices and a section for special or seasonal offers. The page also provides store contact information so that visitors can know how to reach the bakery.
Main features: Product display, prices, offers, contact details and a neat colour combination.
Working: HTML is used to arrange the headings, product information and sections. CSS is used to add colours, spacing, borders and layout styles.
Learning: This project helped me understand how to create webpage sections and style product information using HTML and CSS.

Final output of Sweet Treats Bakery

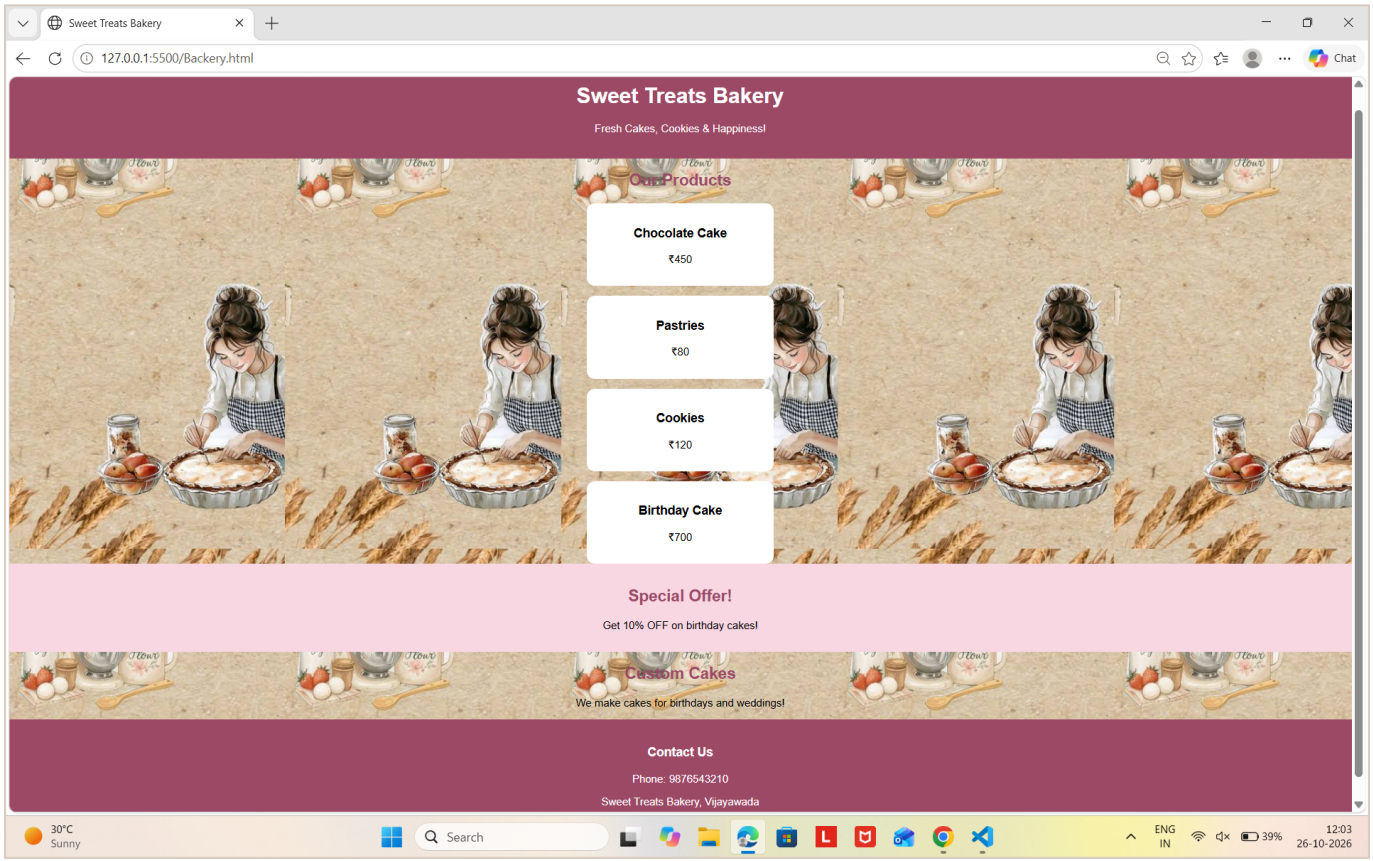

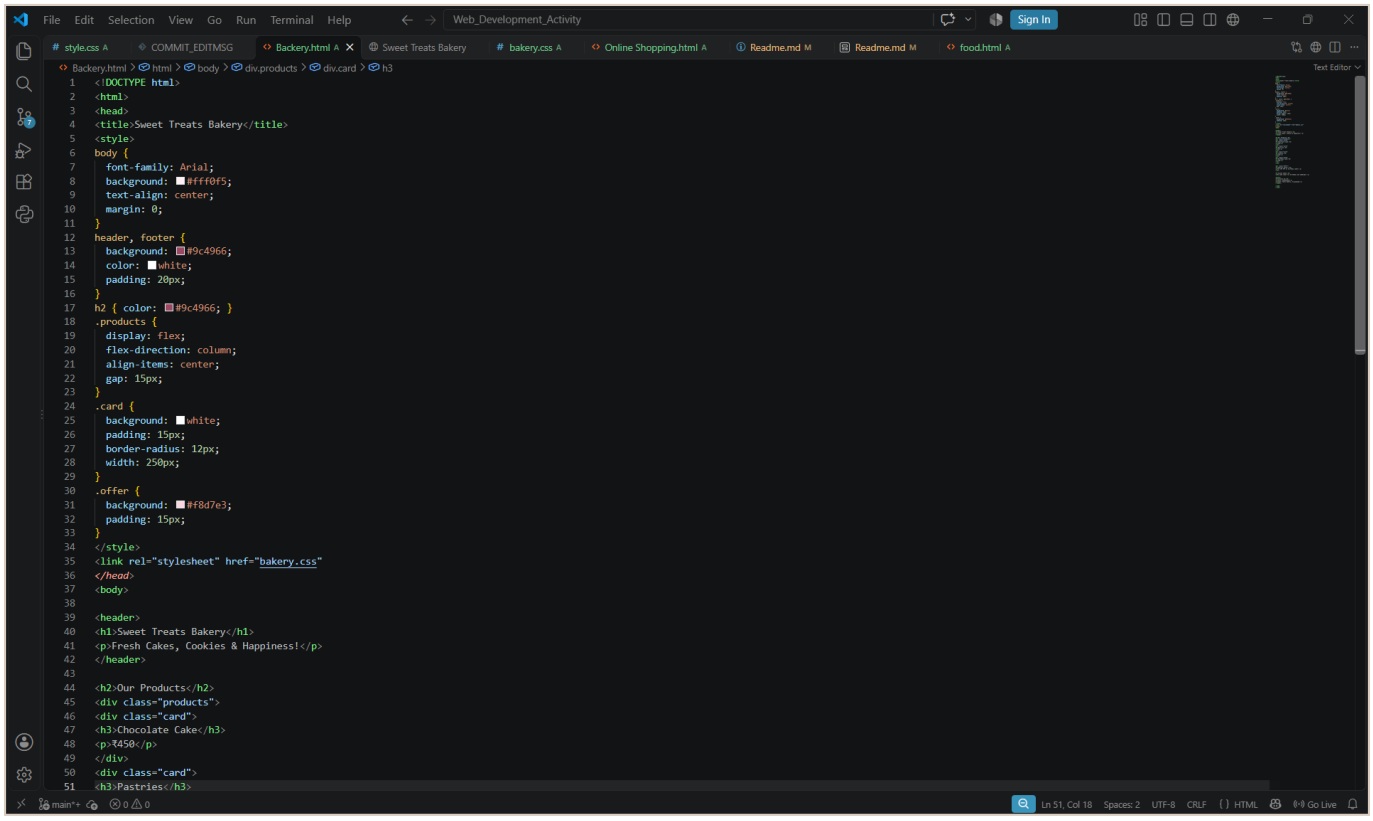

Figure 1.1: Sweet Treats Bakery running at 127.0.0.1:5500/Backery.html

Source code: Backery.html

```
<!DOCTYPE html>
<html>
<head>
<title>Sweet Treats Bakery</title>
<style>
body {
  font-family: Arial;
  background: #fff0f5;
  text-align: center;
  margin: 0;
}
header, footer {
  background: #9c4966;
  color: white;
  padding: 20px;
}
h2 { color: #9c4966; }
.products {
  display: flex;
  flex-direction: column;
  align-items: center;
  gap: 15px;
}
.card {
  background: white;
  padding: 15px;
  border-radius: 12px;
  width: 250px;
}
.offer {
  background: #f8d7e3;
  padding: 15px;
}
</style>
<link rel="stylesheet" href="bakery.css"
</head>
<body>

<header>
<h1>Sweet Treats Bakery</h1>
<p>Fresh Cakes, Cookies & Happiness!</p>
</header>

<h2>Our Products</h2>
<div class="products">
<div class="card">
<h3>Chocolate Cake</h3>
<p>₹450</p>
</div>
<div class="card">
<h3>Pastries</h3>
```

Figure 1.2: Backery.html, lines 1 to 51 (style block, header and first product cards)

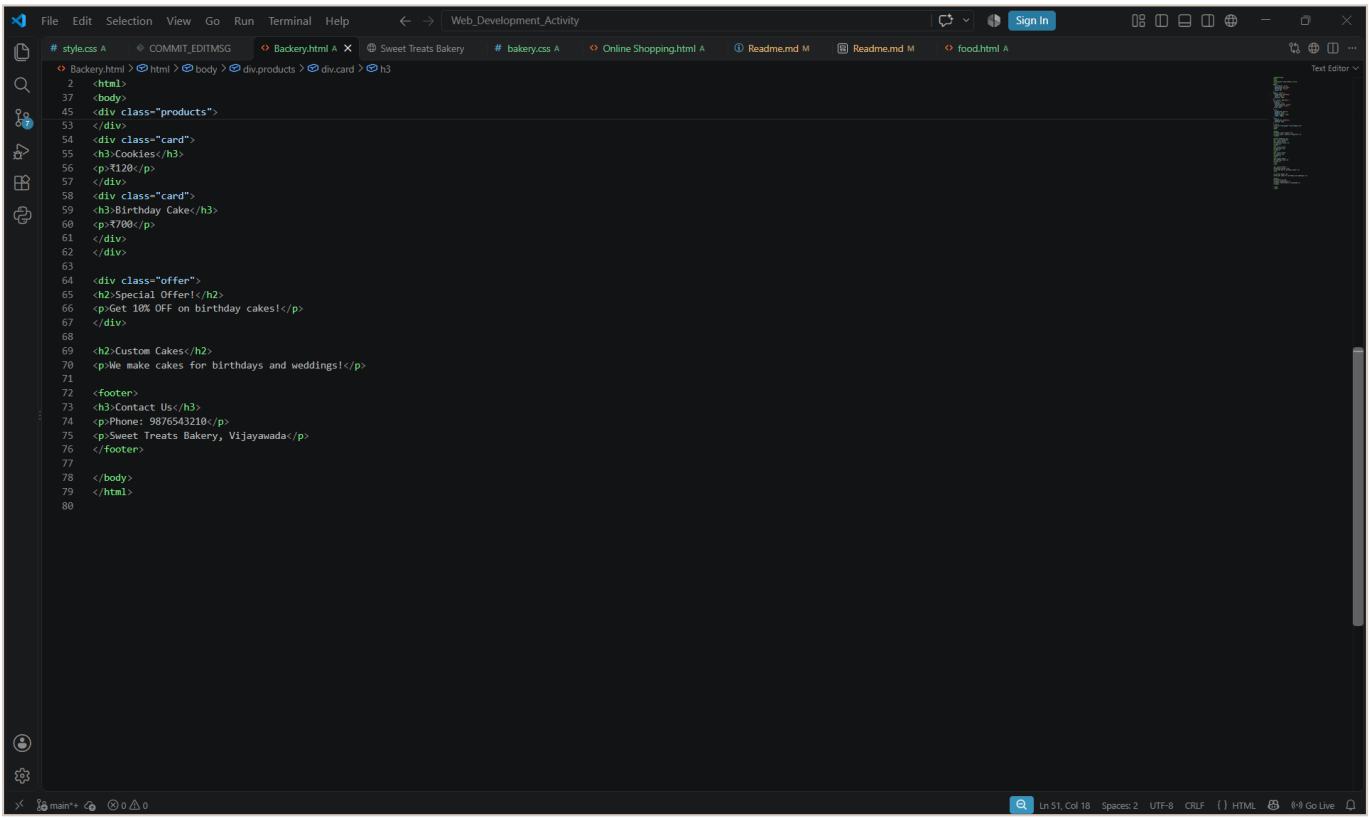

Figure 1.3: Backery.html, lines 53 to 80 (remaining cards, offer, custom cakes and footer)

2. Foodie Corner

Aim. To create a simple food-ordering page for a restaurant in Vijayawada, with a short menu, an offer for new customers, a customer review and contact information. The tagline is *Delicious Food, Happy Moments!*

Page structure

- **Header:** coral background with white text, showing the name Foodie Corner and the tagline.
- **Our Menu:** three centred cards (230px wide, white, 10px rounded corners), each with a dish name, a price and an Order Now button.
- **Special Offer:** Get 20% OFF on your first order!
- **Customer Review:** "Very tasty food!"
- **Footer:** dark (#333) bar with contact number 9876543210 and the address Foodie Corner, Vijayawada.

Menu and prices

Dish	Price
Pizza	₹199
Burger	₹99
Biryani	₹249

Code summary

All CSS is written inside the **<style>** tag in the head. The body has a peach background (#fff0e0), Arial font and centred text. Buttons are coral with white text, 10px padding, no border and 5px rounded corners. Interactivity is added with a small JavaScript call on each button, for example **onclick="alert('Pizza selected!')"**, which shows a message when a dish is chosen.

Objective: To design a food ordering webpage that allows users to view food items and their prices.
Description: The webpage shows restaurant details, food categories, menu items, prices and special offers. Food items are arranged in cards to make the menu easy to read. Customer review information and order buttons are also included.
Main features: Restaurant information, menu categories, food cards, prices, offers, reviews and order buttons.
Working: HTML is used to create the menu and content sections. CSS styles the cards, backgrounds, text and navigation. The order buttons provide a simple interaction on the webpage.
Learning: This project helped me practise card layouts, buttons and arranging menu details in a user-friendly way.

Final output of Foodie Corner

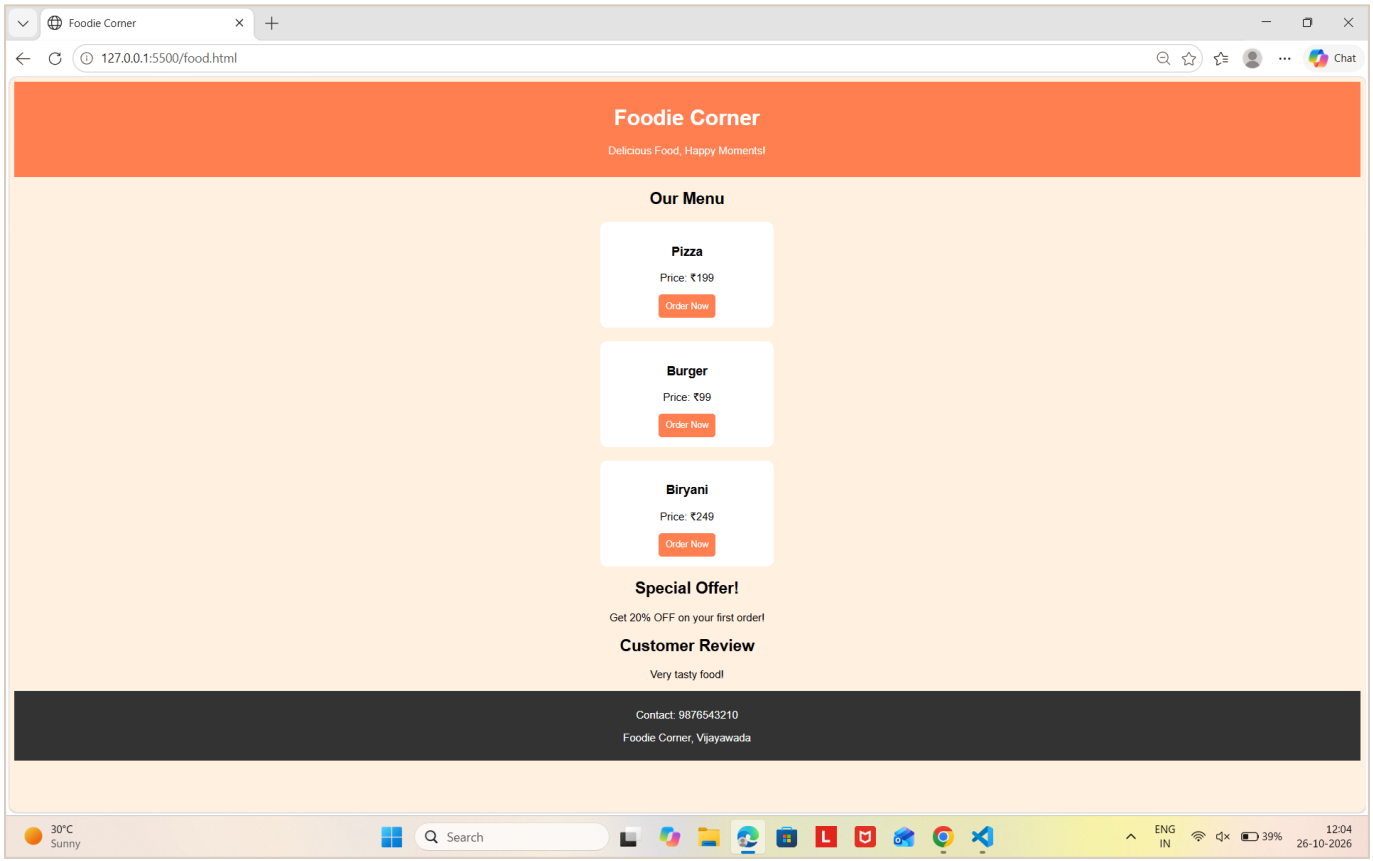

Figure 2.1: Foodie Corner running at 127.0.0.1:5500/food.html

Source code: food.html

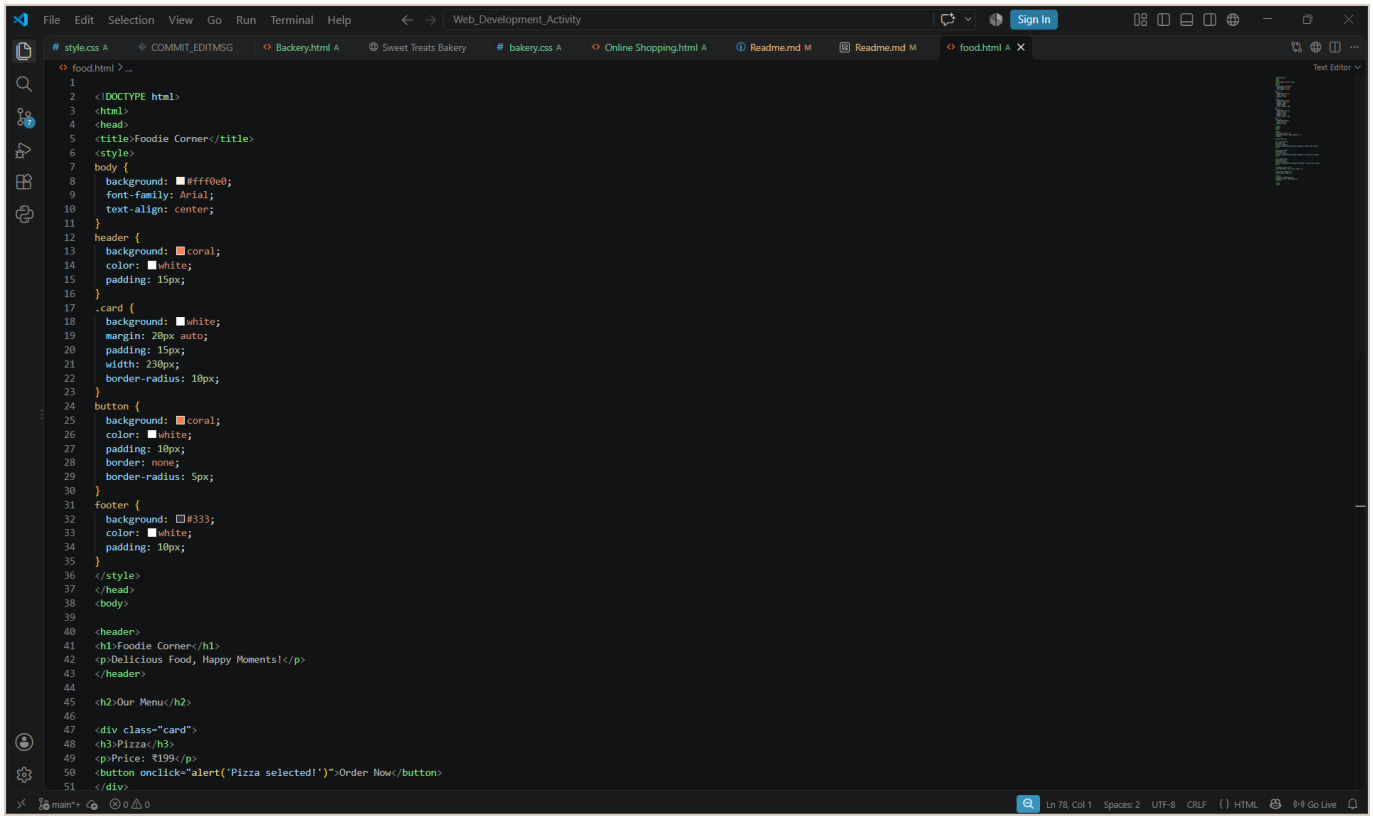

Figure 2.2: food.html, lines 1 to 51 (CSS styles, header and Pizza card)

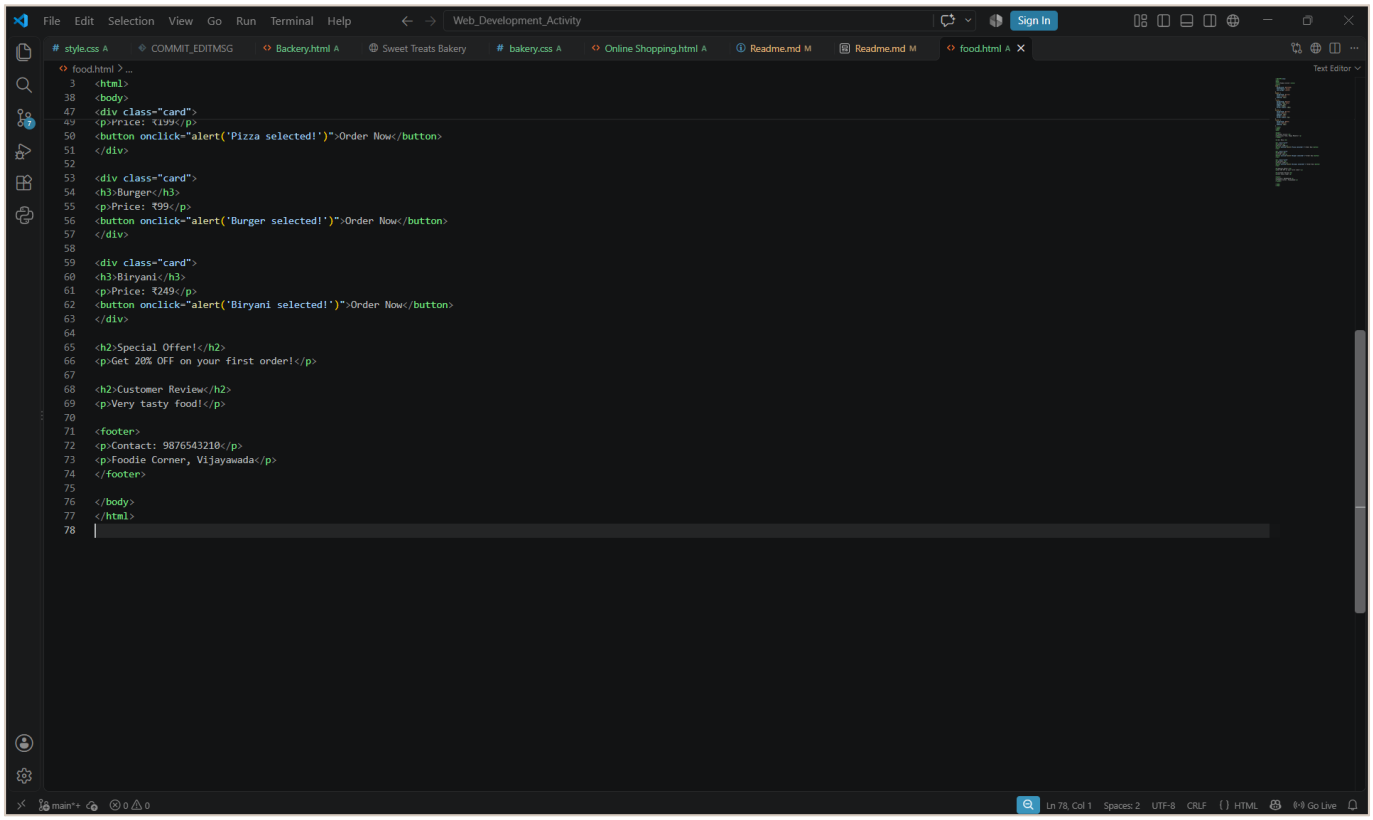

Figure 2.3: food.html, lines 47 to 78 (menu cards, offer, review and footer)

3. StyleCart (Online Shopping)

Aim. To design a more polished, fashion-style online shop with a navigation bar, a hero banner, a product grid and a footer. The brand is **stylecart.** with the tagline *Find your style. Love your look.* The page title is "StyleCart | Aesthetic Shopping".

Page structure

- **Header and navigation:** centred logo and tagline, followed by a sand-coloured menu bar with Home, Shop, Offers and Contact links that scroll smoothly to sections (#home, #products, #offers, #contact).
- **Hero section:** "NEW COLLECTION 2026", the headline *Little things. Beautiful style.*, a short line of text and an Explore Collection button, over a soft gradient and a fashion photograph.
- **Shop Our Collection:** a grid of 8 product cards. Each card has an image from Unsplash, a category label, a product name, a price in rupees and an Add to Cart button.
- **Promo banner:** "MADE FOR YOUR EVERYDAY", the line *A little treat for you.* and a Shop Now button.
- **Footer:** brown bar with the brand name, *Simple style. Beautiful living.*, the email stylecart@example.com and a 2026 copyright line.

Products and prices

Product	Category	Price
Classic T-Shirt	Clothing	₹499
Everyday Sneakers	Footwear	₹1,299
Classic Watch	Accessories	₹999
Daily Backpack	Bags	₹799
Music Headphones	Electronics	₹1,499
Classic Sunglasses	Accessories	₹399
Modern Outfit	Fashion	₹1,199
Wireless Mouse	Tech Accessories	₹599

Code summary

This project separates structure from design: **Online Shopping.html** holds the content and links to an external file with **<link rel="stylesheet" href="style.css">**. In style.css, a universal **box-sizing: border-box** rule keeps sizing predictable, **scroll-behavior: smooth** gives animated scrolling, the body uses Arial on a warm #faf7f2 background, headings use Georgia, and the hero uses a 90 degree linear-gradient with a minimum height of 360px and flexbox centring. Navigation links change to a rose colour (#b46b79) on hover.

Objective: To create an online shopping webpage where users can browse products and view their prices.
Description: The website presents shopping products in a clean layout. Each product section displays product information and price details. The design uses a simple navigation area and product cards to make browsing easier.
Main features: Navigation links, product display, product details, prices and a styled shopping layout.
Working: HTML is used to build the webpage structure and product sections. An external CSS file is used to style colours, fonts, spacing and product cards.
Learning: This project helped me understand how to link an external CSS file and how to organise products neatly on a webpage.

Overall Learning from the Three Test Cases

By completing these three projects, I practised writing basic HTML elements, creating webpage sections, using CSS for design, arranging content with cards and tables, and linking HTML files with CSS files. I also learned to open and test webpages in a browser, find small mistakes and improve the page layout. These activities gave me basic practical experience in web development.

Note: These descriptions explain the purpose and features of each project in simple student-level language. The actual output and code screenshots in the report remain as they were.

Final output of StyleCart

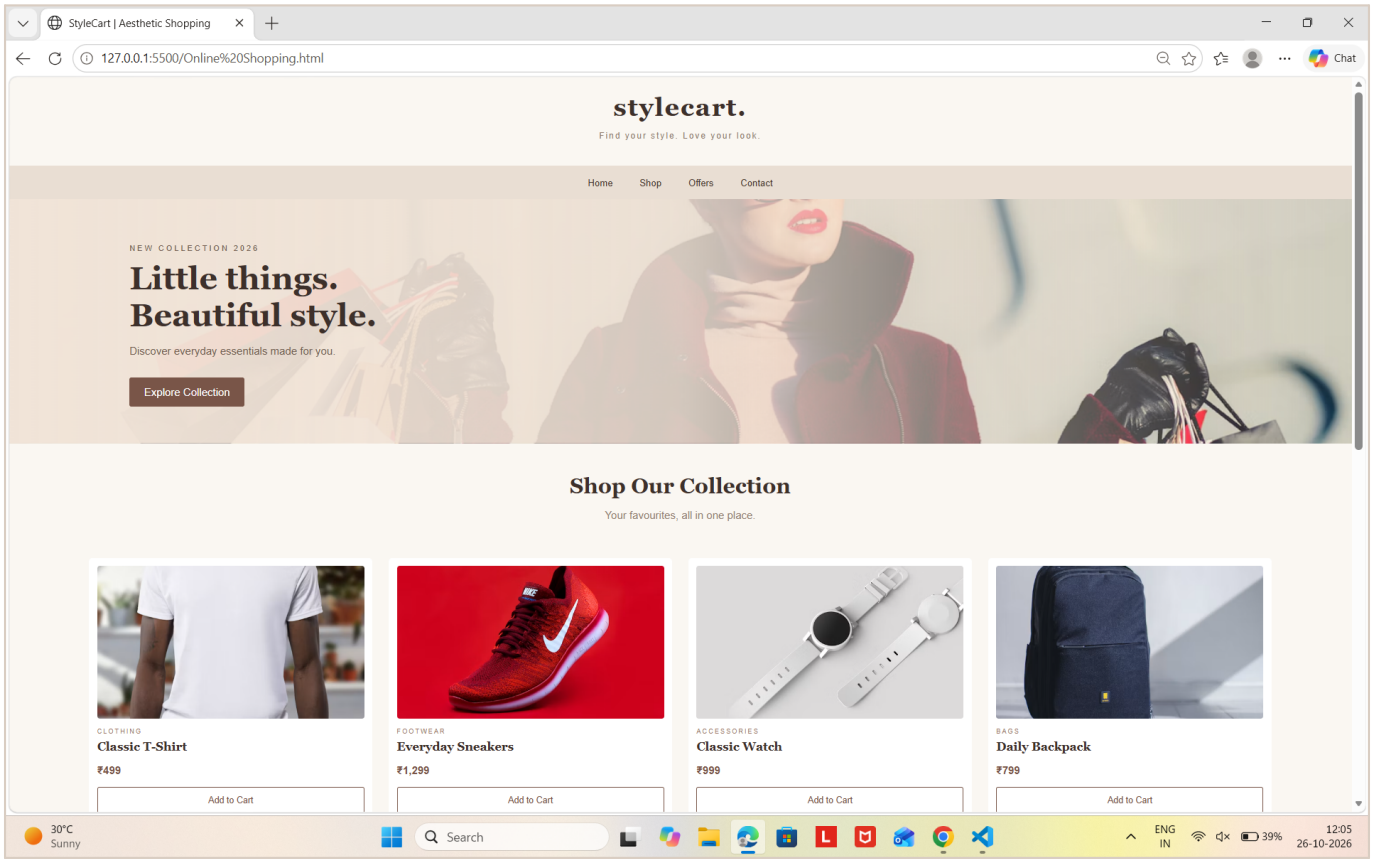

Figure 3.1: StyleCart top of the page: header, navigation, hero banner and first row of products

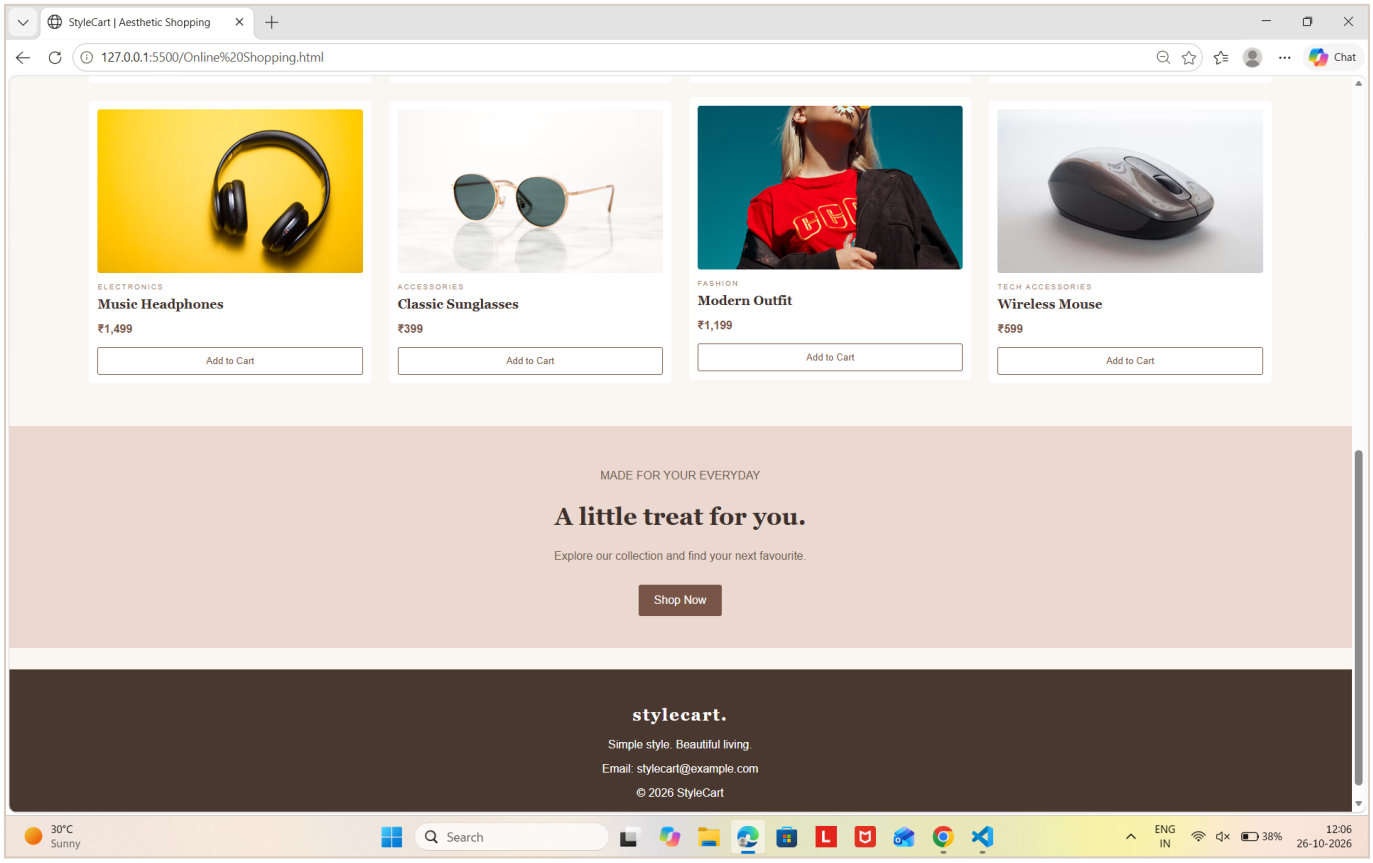

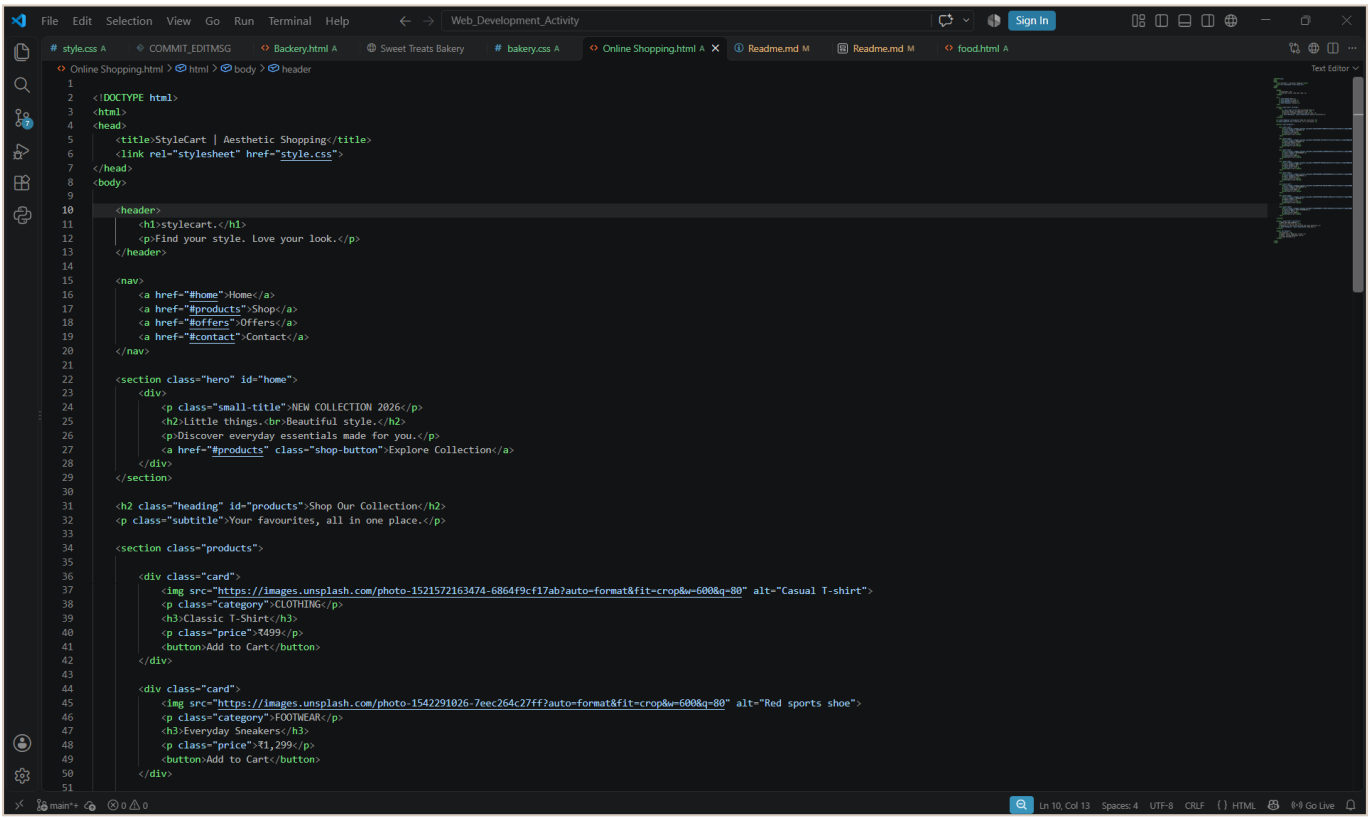

Figure 3.2: StyleCart lower page: second row of products, promo banner and footer

        #f1e4d800
```

Figure 3.4: style.css, lines 1 to 62 (reset, body, header, nav and hero styles)

Conclusion

These three projects show the progression of basic web development skills. Sweet Treats Bakery introduces page structure, cards and flexbox with a mix of inline and external CSS. Foodie Corner adds a menu layout and simple JavaScript interaction. StyleCart brings everything together with an external stylesheet, navigation anchors, a hero section, a product grid with real images and a complete footer.

What was learned

- Structuring pages with header, nav, section, div and footer elements.
- Styling with colours, fonts, padding, borders and rounded corners.
- Using flexbox to centre and arrange content.
- Linking an external CSS file and using anchor links with smooth scrolling.
- Adding simple interactivity with onclick.
- Previewing with Live Server and tracking changes with Git in VS Code.

Possible improvements

- Add product images to the bakery and food pages, as in StyleCart.
- Make the Add to Cart and Order Now buttons update a real cart total.
- Use media queries so every page adapts well to phone screens.
- Combine all three sites into one multi-page website with a shared menu and stylesheet.

Case Study Overview

Web Development Activity | Three mini website projects

1. Sweet Treats Bakery

This website presents a small bakery and its products. It includes a shop heading, product cards, prices, a birthday-cake offer, custom cake information and contact details. The page uses a soft pink and cream colour theme to give it a friendly bakery look.

Main features: product list, prices, special offer, custom cakes and contact information.

2. Foodie Corner · Food Ordering Page

This project is a simple restaurant food-ordering page. It displays popular food items such as pizza, burger and biryani with their prices. It also includes an Order Now button, a first-order discount, a customer review and restaurant contact details.

Main features: menu cards, food prices, order buttons, discount offer, customer review and contact details.

3. StyleCart · Online Shopping Website

This website is an online shopping page for fashion and everyday accessories. It contains a navigation bar, a collection banner, product cards with images and prices, Add to Cart buttons, a promotional section and a footer. The design uses a simple, warm colour theme.

Main features: navigation links, hero banner, product grid, product prices, shopping buttons and promotion.

What I learned

· I learned to arrange webpage content using basic HTML elements.

· I practised CSS colours, fonts, spacing, borders and card layouts.

· I learned to connect HTML pages with CSS files and preview them in a browser.

· I understood how simple buttons and navigation links improve a website.

Prepared by: S. Jyothsna | CSM, Section 4 | Roll No. 26001109
